

African High Integrity Carbon Partners

Promoting Community-Led High Integrity Carbon Credit Projects

- African High Integrity Carbon Partners – FAGRIB LLC: African and USA-based experts, 34 years in African agribusiness, and New Zealand science and carbon market specialists GreenXperts Limited (35 years sustainability) and Carbon Equities New Zealand Limited (8 years carbon broking)
- Promoting community-led projects to support and train local communities to operate independent, locally-controlled high integrity carbon businesses that take the majority of the revenue. Includes compulsory Community Development Plans managed by a Community Project Committee
- RENA Scheme (based on New Zealand's successful model), new, clean, efficient, one-stop, internationally coordinated, scientifically-sound high integrity platform for carbon credit and ITMO generation and sales
- Ecological benefits – accelerate forest restoration to increase carbon value, improve land restoration to protect water supplies, reduce erosion and silting, increase food production, provide better climate change resilience
- Employment benefits – create a wide range of jobs in at least seven sectors: ecologists, agro-ecologists, foresters, agro-foresters, carbon plotting and forest conservation teams, computer and satellite mapping, accounting, carbon broking, media and film, health, tourism, transport, and community services. All of these sectors provide opportunities for women and youth to learn new skills and progress into world class occupations
- Financial benefits – locals control their own carbon and biodiversity resources and receive at least 60% of revenues. Long term (10–30 years) credit supply contracts offered by AHICP. Realistic financial planning can be done for co-benefit projects in drinking water, electricity, food crop expansion, cold storage, warehousing, market access. Best of all, more young people can have a future in their local community
